

EXPERTOR

P i e c e n e s t i n g

- Expertor will significantly enhance your die-less cutting system
- Maximise the yield of your cutting system in a continuous process, without the need to wait for cutting to be completed
- An efficient system that can service more than one cutting table
- More efficient use of the professional skills of leather experts
- Silent technology, suitable for all environments
- Real time exchange of information between shoe factory headquarters and remote cutting departments both via local network and internet

EXPERTOR

Working area	1500x1000 mm
Size (L x P x H)	1,6 x 2 x 2,9 m
Weight	314 Kg
Mains	230V - 50/60Hz
Max electrical input	700 W
Equipment	PC Pentium Intel of latest generation, LCD monitor, ergonomic keyboard, cordless mouse, Nestor software, high luminosity colour projection system, mirror with no refraction
Magnetic nesting	Yes
Pieces grouping with auto scaling	Yes
Automatic nesting	Yes
Production orders manager	Yes
Materials manager	Yes
Interface with company information system	Yes
Network connection	Yes

THE CHARACTERISTICS CAN BE MODIFIED WITHOUT PREVIOUS NOTICE

Imagine a cutting system which continually receives input for new operations and works non-stop, independently from the professional ability of the operator. This is Expertor, the system that turns this image into reality.

Thanks to Expertor, the qualified cutter can maximise productivity by concentrating on the creation of the most cost effective nesting of leather pieces, without the distraction of operating the cutting table. At any time the Expertor operator can associate as many "targets" as he wishes to the nesting; the targets are visual aids which will help the Nestor cutting operator to place the leather so that he can proceed with cutting of components in an easy, quick, accurate and efficient manner. The cutting operation ends with the collection of pieces, assisted by the specific functions of Nestor software.

The uniqueness of the Nestor solution, with two fixed projectors, enhanced by the Expertor system will allow the operator of the cutting table to cut components continuously.

Software

An accurate piece nesting is guaranteed by the latest evolution of the Nestor system. Nestor is a reliable and powerful tool coming out of years of in-the-field testing of die-less cutting systems.

The new and exclusive functions of the Expertor system allow the cutter to quickly define targets, to easily load and save workfiles, to use powerful nesting solutions that incorporate piece grouping and magnetic or automatic positioning functions.
